PROJECTS

Youtube Clone

Its is a youtube clone in which you can create video and any other user can watch the video like,share,watchLater,history and also dislike the video all the basic functionality

Tech: React, TailwindCSS, Node, express, MongoDB, firebase, jwt, bcryptjs

Github: <https://github.com/Syed-Urwah/myTube1.1>

Live: <https://my-tube1-1.vercel.app/>

Chat App

It is a simple chat app where user can send message to any user including media files.

Tech: React, TailwindCSS, Node, express, socket.io, MongoDB, firebase, jwt, bcryptjs

Github: <https://github.com/Syed-Urwah/SyedChat>

Maintenance Management System (NextJs)

It is a saas based product where user register there company and and multiple location on it and in each location there are parts and product which is available for maintenance and we can also create agents and assign them tasks related to product or parts it is also secure that only agent can view his task and admin can do all the stuff and no one can see other company details

Learning Management System (Laravel) (Darul Uloom)

itt is a project that i have lead as a team leader and manage all the team like git and merged the code

In the project we have implemented all the process of admission merit based admission all the calculation are auto and all other functionality like classes, section,teachers and attendance of each student and reward based on attendance and more stuff.

EXPERIENCE

iPlexSoft

June (2023) - Present

I'm working in this company as a Mern stack developer but because of my Wordpress experience i'm also managing different kind of Wordpress site in this company
